
Sure Grip

Ball bearing; sure grip anywhere.

An extra base is furnished to be used under warranted conditions and a 36-inch handle with a universal joint permits unhindered jack use.

No interference from bumpers, springs, spare tires or gas tanks.

Jack finished in copper bronze. Jack handle and base aluminum finished. The length of the handle clears the bumpers while a universal joint in same permits unhindered use. A positive lock in the form of a cotter key locks the handle securely to the jack

The use of the extra base is warranted at all times. Rough paved city streets and the soft shoulders along paved highways find its use almost indispensable.
